3.1 Habitat types present on the site and assessment for them

[illegible]

9430	X		151.38		M	A	C	A	A
------	---	--	--------	--	---	---	---	---	---

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Other Site Characteristics

Istituito con legge nazionale 24/4/1935 n.740 nelle Alpi centrali, al confine con la Svizzera (limitrofo al parco svizzero dell'Engadina), a ridosso ed attorno al grande comprensorio montano dell'Ortles-Cevedale, in un territorio interessante le regioni Lombardia e Trentino, ad una altitudine di 644-3905 m s.l.m. ed una estensione complessiva di 134619 ha, di cui 61000 in Lombardia. Il territorio è essenzialmente montuoso nel cuore delle Alpi e dominato dal grandioso massiccio dell'Ortles-Cevedale. Dal punto di vista geologico è costituito da due grandi unità principali tra loro nettamente distinte, le rocce cristalline di origine metamorfica e le rocce calcareo dolomitiche di origine sedimentaria, e da rocce ignee, di estensione molto ridotta, affioranti principalmente al contatto tra il sedimentario e il cristallino. La formazione vegetale più estesa è il bosco a Larice e Abete rosso che ricopre, dal fondovalle ai 1800 m di latitudine, circa 25000 ha di parco. La fauna è rappresentata da Cervo, Capriolo, Camoscio, Stambecco, Marmotta, Ermellino, Faina, Tasso, Volpe. L'avifauna è presente con Fagiano di monte, Gallo cedrone, Pernice bianca, Francolino di monte, ed inoltre: Picchio Muraiolo, Picchio nero, Picchio rosso minore. Tra i rapaci: Falco pecchiaiolo, Aquila reale, Falco pellegrino, Poiana, Sparviero. Numerosi sono gli uccelli stanziali e migratori che trascorrono il periodo invernale nel parco. Tra gli anfibi: Salamandra alpina, Salamandra pezzata, Tritone alpino, Rana temporaria.

4.2 Quality and importance

L'importanza del sito è data dalla elevata diversità di habitat, sono qui presenti tutti i termini della successione altitudinale, e dalla presenza di alcune specie rare o minacciate, rappresentate da popolazioni molto ricche, quali Leontopodium alpinum, Thalictrum alpinum, Saxifraga vandellii.

4.2 Quality and importance

Le pareti rocciose fortemente acclivi caratterizzano l'aspetto paesaggistico e condizionano la vegetazione. La foresta è prevalentemente di latifoglie ma non mancano le aghifoglie in nuclei localizzati. La flora rupicola ha una forte presenza di specie endemiche e di grande interesse botanico. La diversità floristica è alta.L'area presenta un'erpetocenosi tipica delle zone montane, escludendo, considerata l'altitudine, le specie tipiche degli orizzonti alpino e subalpino. Si segnala la presenza potenziale di Bombina variegata.Le caratteristiche dell'habitat determinano condizioni mediamente favorevoli alla presenza di specie dell'avifauna tipiche della zona montano-alpina.A livello di potenzialità si segnalano altri elementi significativi quali, ad esempio, Astore, Rondone maggiore, Picchio nero e rondine montana. Si contano 54 specie nidificanti.Il popolamento teriologico è ben diversificato, in particolare per le componenti degli Insettivori e dei Chiroterri. Tra i Carnivori si segnala la presenza della Martora.

4.2 Quality and importance

La maggior parte del territorio è caratterizzato da arbusteti e boscaglia di latifoglie e solo localmente sono presenti tratti di una certa estensione di foresta di Faggio e di Acero.L'area è abitata da specie dell'erpetofauna tipiche delle foreste del piano montano accanto a taxa di orizzonti a maggiore altitudine.Nel complesso l'area ospita una significativa frazione delle specie tipicamente montano-alpine del territorio lombardo ad indicazione di un ambiente dai buoni livelli di qualità ecologica. La presenza della vegetazione mista a conifere determina condizioni favorevoli per la diversità ornitica. La presenza di aree aperte costituisce un utile territorio di caccia per i rapaci diurni. Tra le specie presenti si segnala la presenza di Francolino di monte, Astore, Picchio nero e Civetta capogrosso.L'area è caratterizzata dalla presenza di un buon numero di specie di Roditori, tra cui ad esempio il Moscardino, il Quercino e l'Arvicola delle nevi.

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Sono presenti zone umide, arbusteti e limitati complessi boschivi, oltre a praterie xeriche alle quote più elevate. Nel complesso si rileva una elevata diversità floristica.L'erpetocenosi dell'area è piuttosto complessa e completa in quanto il territorio comprende anche aree aperte di bassa quota.L'escursione altitudinale, le condizioni fisiografiche, la tipologia di vegetazione boschiva e la zoocenosi presente determinano condizioni decisamente favorevoli alla presenza di specie ornitiche tipiche della zona montano-alpina; di particolare rilievo è segnalata la presenza del Gallo cedrone, nonché di Astore e Aquila reale. Si contano oltre 60 specie nidificanti. Nell'area in oggetto è scarsa la presenza degli Ungulati mentre si riscontrano elementi di sicuro interesse tra i Chirotteri quali ad esempio Pipistrello di Nathusius e Nottola di Leisler.

4.2 Quality and importance

E' un' area relativamente selvaggia caratterizzata da una buona varietà di ambienti e di flora.L'area rivela, tra l'altro, condizioni forestali di buona strutturazione e funzionalità ecologica provate dalla presenza, ad esempio, del Picchio nero, del Gallo cedrone e della Civetta capogrosso, sebbene questi ultimi con riscontri più limitati. Nel complesso l'area ospita una significativa frazione delle specie tipicamente montano-alpine dell'area lombarda, ad indicazione di un ambiente dai buoni livelli di qualità ecologica. Il popolamento ornitico (60 specie nidificanti totali) risulta variamente strutturato ecologicamente in termini di ricchezza specifica.L'erpetocenosi di questa vasta area comprende sia specie tipiche del piano montano sino a taxa propri dei piani subalpino e alpino.Per quanto concerne la mammalofauna quest'area presenta il popolamento con maggior diversità specifica. Buona è la presenza di Chiroterri ed Insettivori (con 5 e 8 specie rispettivamente), particolarmente sensibili e legate a condizioni di discreta qualità ambientale. In particolare di estrema rilevanza è il Toporagno alpino, specie rara e localizzata in Lombardia, tra gli Insettivori, e del Vespertilio mustacchino e del Serotino di Nilsson tra i Chiroterri.

1. SITE IDENTIFICATION

1.1 Type	1.2 Site code	Back to top
A	IT2070401	

1.3 Site name

Parco Naturale Adamello

1.4 First Compilation date	1.5 Update date
2005-04	2020-04

1.6 Respondent:

Name/Organisation:	Regione Lombardia Direzione Generale Ambiente e Clima - Struttura Natura e biodiversità
Address:	Piazza Città di Lombardia 1, 20124 Milano
Email:	ambiente_clima@pec.regione.lombardia.it

1.7 Site indication and designation / classification dates

Date site classified as SPA:	2004-02
National legal reference of SPA designation	D.G.R. 16338/2004

2. SITE LOCATION

2.1 Site-centre location [decimal degrees]:

[Back to top](#)

Longitude	Latitude
10.464126	46.042936

2.2 Area [ha]:	2.3 Marine area [%]
21722.0	0.0

2.4 Sitelength [km]:
0.0

2.5 Administrative region code and name

NUTS level 2 code

Region Name

ITC4	Lombardia
------	-----------

2.6 Biogeographical Region(s)

Alpine (100.0%)

3. ECOLOGICAL INFORMATION

9410🐾			929.03		P	B	C	B	B
9420🐾			607.01		P	B	C	B	B

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

Species					Population in the site					Site assessment

4.2 Quality and importance

L'area del Parco comprende tutto il versante del gruppo dell'Adamello che si estende dai 1000 m agli oltre 3500 m sul livello del mare, fatto che contribuisce alla varietà degli ecosistemi presenti. Si va infatti dai boschi misti di caducifoglie alle peccete, per arrivare ai boschi di larice, alla fascia degli arbusti nani e ai pascoli alpini delle quote maggiori. Diversi gli endemismi vegetali presenti, in particolare nella parte meridionale; tra questi Primula daoniensis, Campanula Raineri, Cypripedium calceolus, Saxifraga vandellii, Linaria alpina. La fauna alpina è abbondantemente rappresentata in tutti i principali gruppi sistematici. Tra i mammiferi spicca la presenza di ungulati e carnivori.

4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]
M	G01.02		i
H	G01.03.02		i
L	I03.01		i
M	H01.03		i
L	G01.04.01		i
M	A04.01.05		i
L	G02.02		i
H	F03.02.03		b
M	G01.06		i
H	J02.06.06		i
M	A04.03		i
M	D02.01.01		i
M	D01.01		i
M	B06		i
M	E01.04		i

Positive Impacts			
Rank	Activities, management [code]	Pollution (optional) [code]	inside/outside [i o b]

Rank: H = high, M = medium, L = low

Pollution: N = Nitrogen input, P = Phosphor/Phosphate input, A = Acid input/acidification,

T = toxic inorganic chemicals, O = toxic organic chemicals, X = Mixed pollutions

i = inside, o = outside, b = both

4.4 Ownership (optional)

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **Group:** A = Amphibians, B = Birds, F = Fish, I = Invertebrates, M = Mammals, P = Plants, R = Reptiles
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Type:** p = permanent, r = reproducing, c = concentration, w = wintering (for plant and non-migratory species use permanent)
- **Unit:** i = individuals, p = pairs or other units according to the Standard list of population units and codes in accordance with Article 12 and 17 reporting (see [reference portal](#))
- **Abundance categories (Cat.):** C = common, R = rare, V = very rare, P = present - to fill if data are deficient (DD) or in addition to population size information
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation); VP = 'Very poor' (use this category only, if not even a rough estimation of the population size can be made, in this case the fields for population size can remain empty, but the field "Abundance categories" has to be filled in)

3.3 Other important species of flora and fauna (optional)

N20	1.0
N10	9.0
Total Habitat Cover	100

Other Site Characteristics

Nell'area sono presenti anche importanti leccete primitive, orno ostrieti termofili e ostrieti mesifili con faggio.

4.2 Quality and importance

Sito estremamente significativo da un punto di vista naturalistico per la presenza di numerosi tipi di habitat, legati anche alla ampia escursione altitudinale. Di inestimabile valore la flora subalpina legata alle praterie calcaree e alle rupi carbonatiche. Estremamente importante anche la presenza di vegetazione di tipo mediterraneo in areale disgiunto con querceti a Quercus ilex. La presenza di numerosi elementi floristici, da quelli mediterranei a quelli illirici e centroeuropei, in uno spazio così ravvicinato costituiscono un importante elemento naturalistico e paesaggistico per la regione alpina. E' una delle zone di maggior valore faunistico; per l'avifauna si segnala la presenza di Gallo cedrone, Gallo forcello, Coturnice, Francolino di monte, Picchio cenerino, Aquila reale, Biancone, Civetta nana e Gufo reale. Spicca la presenza nell'area della più antica stazione per l'inanellamento degli uccelli migratori di tutta l'Europa meridionale (Passo di Spino). Sono presenti numerose specie di Chiroterri; l'area è interessata da un importante, ma ancora poco conosciuto, flusso migratorio.

4.3 Threats, pressures and activities with impacts on the site

The most important impacts and activities with high effect on the site

Negative Impacts			
Rank	Threats and pressures [code]	Pollution (optional) [code]	inside/outside [i o b]

3. ECOLOGICAL INFORMATION

[Back to top](#)

3.1 Habitat types present on the site and assessment for them

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
3150			1.31		P	B	C	C	C
3260			1.95		P	C	C	B	C
3270			2.42		P	D			
6210	X		2.53		P	A	C	B	B
6430			1.48		P	C	C	B	C
91E0			0.74		P	B	C	B	B
91F0			18.77		P	A	C	B	B

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

N21	5.0
N16	66.0
N08	3.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

Il sito occupa una posizione di primario interesse all'interno del contesto fortemente antropizzato del Parco dell'Oglio. Ha morfologia prevalentemente pianeggiante, con suolo da ghiaioso-sabbioso a ciottoloso, intervallata da lanche e raccolte temporanee d'acqua che offrono habitat adatto alla deposizione di uova per un gran numero di anfibì. Notevole è anche la presenza di uccelli legati in particolare all'ambiente ripariale e allo strato arbustivo della vegetazione. Di particolare interesse anche l'apprezzabile differenziazione di habitat che si riscontra, a partire dalla vegetazione delle acque correnti per arrivare al bosco paraclimacico a dominanza di Quercus robur e Ulmus minor. Quest'ultimo, in particolare, possiede caratteristiche di buona naturalità e maturità, sia in riferimento alla struttura che alla composizione.

4.3 Threats, pressures and activities with impacts on the site

3. ECOLOGICAL INFORMATION

3.1 Habitat types present on the site and assessment for them

[Back to top](#)

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
3130 			1.22			B	C	B	B
3150 			2.16			B	C	B	B
6410 			2.18			C	C	C	C
6510 			3.39			B	C	B	B
7210 			3.3			B	C	B	C

7230		81.11			B	C	B	B
91E0		0.46			C	C	C	B

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

- **Group:** A = Amphibians, B = Birds, F = Fish, Fu = Fungi, I = Invertebrates, L = Lichens, M = Mammals, P = Plants, R = Reptiles
- **CODE:** for Birds, Annex IV and V species the code as provided in the reference portal should be used in addition to the scientific name
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Unit:** i = individuals, p = pairs or other units according to the standard list of population units and codes in accordance with Article 12 and 17 reporting, (see [reference portal](#))
- **Cat.:** Abundance categories: C = common, R = rare, V = very rare, P = present
- **Motivation categories:** IV, V: Annex Species (Habitats Directive), A: National Red List data; B: Endemics; C: International Conventions; D: other reasons

4. SITE DESCRIPTION

4.1 General site character

[Back to top](#)

Habitat class	% Cover
N07	50.0
N15	5.0
N21	10.0
N06	35.0
Total Habitat Cover	100

Other Site Characteristics

Nuovo habitat proposto di interesse regionale codice CORINE 22.4311, sup.coperta 11% della superficie del sito. Rappresentatività B, sup.relativa C, grado conservazione B, valutazione globale B.

4.2 Quality and importance

Risulta essere uno degli ultimi lembi di ambiente palustre nella Pianura bresciana. Riveste un importante ruolo per l'avifauna sia stanziale sia migratoria. È luogo preferenziale per la nidificazione di molte specie palustri. E' inoltre un ambiente idoneo alla riproduzione di anfibi e rettili. Il sito si presenta come un mosaico di specchi d'acqua alternati a vecchi camminamenti su cui è presente una vegetazione naturale sia erbacea che arborea in parte alterata dall'ingresso di specie vegetali alloctone di origine nordamericana. Il resto dell'area è per gran parte occupato da ampie plaghe di vegetazione palustre, cariceti e magnocariceti, che caratterizzano marcatamente l'ambiente della Riserva. Gli specchi d'acqua, nelle parti meno profonde, sono occupate da un lamineto improntato essenzialmente a *Nymphaea alba*.

4.3 Threats, pressures and activities with impacts on the site

4.4 Ownership (optional)

4.5 Documentation

5. SITE PROTECTION STATUS (optional)

3. ECOLOGICAL INFORMATION

3.1 Habitat types present on the site and assessment for them

[Back to top](#)

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
3260 			0.76			B	C	B	B
3270 			1.52			A	C	B	B
6210 	X		4.56			A	C	B	B
6430 			0.76			C	C	B	C
91E0 			3.8			B	C	B	B

91F0		22.8			B	C	B	B
------	--	------	--	--	---	---	---	---

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

N16	35.0
N06	3.0
N07	10.0
N23	42.0
N22	10.0
Total Habitat Cover	100

Other Site Characteristics

Sebbene inserito in un contesto fortemente antropizzato, il sito appare meritevole da un punto di vista naturalistico poichè costituisce una delle poche zone umide legate alla divagazione naturale del fiume, la cui vegetazione ripariale ed idrofita costituisce l'habitat necessario per la permanenza e la nidificazione delle numerose specie di avifauna, di cui molte di interesse comunitario. Ricca e significativa anche l'ittiofauna.

4.2 Quality and importance

Costituisce una delle poche zone umide legate alla divagazione naturale del fiume Oglio. L'area rappresenta un'apprezzabile diversificazione ambientale, è occupata da un bosco misto, parte ad alto fusto, parte a ceduo, e il suolo è ghiaioso sabbioso. Gli aspetti vegetazionali caratterizzanti l'area vanno dalle comunità erbacee a elofite e idrofite sino al bosco paraclimacico a dominanza di Quercus robur e Ulmus minor. La vegetazione ripariale e idrofita, fornisce habitat adatto ad una numerosa e diversificata avifauna, con molte specie di interesse conservazionistico. Importante è anche la presenza dell'ittiofauna.

N19	69.0
N14	3.0
N09	11.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Il sito presenta habitat diversificati: boschi misti di peccio e faggio, praterie aride e prati da sfalcio. In tutti e tre i casi si tratta di cenosi in buono stato di conservazione. I prati appartenenti alla classe Festuco-Brometea

sono da considerare interessanti perchè possono ospitare specie di orchidee se non subiscono pressioni antropiche (taglio, pascolamento). In questo caso è stata ritrovata *Orchis maculata*.

4. SITE DESCRIPTION

4.1 General site character

[Back to top](#)

Habitat class	% Cover
N23	73.0
N16	27.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

L'importanza del sito deriva principalmente dalle specie animali citate esubordinatamente dalla vegetazione forestale. Il bosco, ancorchè alterato dalla presenza di esotiche ed infestanti, risulta ben sviluppato ed in buono stato di conservazione; esso risulta significativo anche perchè rappresenta uno dei pochi elementi naturali in un contesto fortemente antropizzato

4.3 Threats, pressures and activities with impacts on the site

4.4 Ownership (optional)

4.5 Documentation

4. SITE DESCRIPTION

[Back to top](#)

4.1 General site character

Habitat class	% Cover
N08	50.0
N23	3.0
N07	47.0
Total Habitat Cover	100

Other Site Characteristics

Area adiacente a impianti turistici e di risalita, prevalentemente occupata da torbiere acide, intermedie e basse. Sono presenti molte pozze circolari, originate dall'esplosione di granate durante la Prima Guerra Mondiale, numerose sorgenti e percolazioni che danno origine a un cospicuo reticolo di ruscelli. Sui versanti più acclivi crescono cespuglieti ad *Alnus viridis* e consorzi ad alte erbe alternati a cespuglieti di *Rhododendron ferrugineum* e lembi di prateria acidofila (nardeti) che, unitamente alle zone umide, danno origine a un variegato mosaico vegetazionale.

4.2 Quality and importance

Sito di elevata importanza geobotanica sia per la varietà e vastità del mosaico vegetazionale igrofilo sia per la presenza di molte specie rare, quali *Andromeda polifolia*, *Vaccinium microcarpum*, *Carex lasiocarpa*, *Scheuchzeria palustris*, *Dactylorhiza cruenta*, *Lycopodiella inundata* e *Utricularia minor*. Gli aspetti vegetazionali di maggior rilievo sono costituiti da ampi lembi di torbiera intermedia sparsi in tutta l'area e da piccoli lembi di saliceto misto, di saliceto a *S. foetida* e *S. helvetica*.

N17	52.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Dal punto di vista naturalistico e paesaggistico il sito presenta aree di notevole interesse con una ricca componente faunistica e floristica. Le valli ospitano infatti importanti formazioni a Pino cembro ed estese boscaglie a Pino mugo. In particolare si osservano due interessanti tipologie: la boscaglia microterma a pino mugo su sfagni, perfettamente conservata e ricca di briofite, e la boscaglia a pino mugo acidofila, più rada ma altrettanto importante soprattutto per la difficoltà di reperimento di tali cenosi in Val Camonica. Altri habitat ben rappresentati sono gli arbusteti ad azalea nana presenti ad alta quota, in prossimità dei macereti e le formazioni erbacee a Festuca varia sui costoni rocciosi.

4. SITE DESCRIPTION

4.1 General site character

[Back to top](#)

Habitat class	% Cover
N17	65.0

N08	18.0
N16	1.0
N11	16.0
Total Habitat Cover	100

Other Site Characteristics

L'area è totalmente compresa in una riserva integrale del Parco regionale dell'Adamello

4.2 Quality and importance

Le Valli Rabbia e Galinera sono interessanti dal punto di vista conservazionistico poiché presentano ambienti selvaggi, difficilmente raggiungibili. La maggior parte dei sentieri è infatti abbandonata e questo ha contribuito ad isolare le valli e ad elevarne il grado di naturalità. Le peccete montane si estendono per un vasto territorio e sono in parte di ricolonizzazione, in parte rappresentative dell'habitat. I macereti in prossimità del Corno Baitone e del Corno delle Granate sono caratterizzati da una vegetazione pioniera con una biodiversità piuttosto elevata.

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Il S.I.C. è caratterizzato da una notevole varietà di ambienti in ottimo stato di conservazione. Dal punto di vista paesaggistico si sottolinea la presenza della Conca del Bos con il lago e la torbiera, gli affioramenti calcarei con una ricca flora calcicola, le aree limitrofe a Passo del Coppo molto selvagge e con torbiere ben

conservate.

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

Gli habitat del sito in esame sono mediamente in buono stato di conservazione. Si sottolinea soprattutto la presenza di vegetazioni di rupi calcaree, caratterizzate da boscaglie di pino mugo e rododendro irsuto e praterie discontinue a Caricion australpinae. E' inoltre rilevante la presenza di una piccola torbiera presso il sentiero di Passo Mezzamalga.

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

Si tratta di un'area molto estesa, di grande valore paesaggistico oltre che ambientale, le cui maggiori peculiarità risiedono nella presenza di praterie calcicole, assai ben caratterizzate e floristicamente ricche, di arbusteti a Pinus mugo e di numerose zone umide distribuite in tutto il territorio. Il quadro ambientale è completato, alle quote inferiori, da foreste di conifere a peccio e larice.

4.1 General site character

[Back to top](#)

Habitat class	% Cover
N11	78.0
N22	17.0
N08	5.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

La presenza di substrati carbonatici tra substrati cristallini determinano un mosaico vegetazionale abbastanza peculiare all'interno del parco dell'Adamello; alto valore assumono le praterie del Caricion austroalpinae, che, in questo territorio, sono al limite settentrionale del loro areale principale.

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Gli habitat del sito sono mediamente in un buono stato di conservazione. In particolare, la torbiera di Malga Lavedole è di elevato pregio naturalistico e necessita di interventi di tutela per preservarla dal pascolamento del bestiame, in questa area ancora attivo. Nel sito sono inoltre presenti, come una tra le poche stazioni dell'intera provincia bresciana, boschi di Pino cembro caratterizzati da individui maturi. Data la particolare ubicazione e l'elevato pregio naturalistico dell'area, si segnalano, al fine di un possibile ripristino, i ruderi di Malga Lavedole, di significativo interesse storico-culturale nonché turistico.

Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Sito costituito da boschi misti di aghifoglie con sporadiche latifoglie, caratterizzati da notevole complessità strutturale cui corrisponde un' elevata varietà di nicchie ecologiche. In risposta a queste condizioni si osserva un ricco comparto faunistico con presenza di numerose specie e buone popolazioni di ungulati. Significativa la presenza di Tetrao urogallus, specie ormai limitata a piccoli territori, che trova qui un suo sito di nidificazione.

4.1 General site character

Habitat class	% Cover
N07	100.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Nonostante l'assenza di habitat prioritari, il sito risulta significativo dal punto di vista naturalistico, perchè rappresenta l'unica stazione accertata di *Triturus cristatus* nel territorio del Parco dell'Adamello. Dal punto di vista floristico si sottolinea la presenza di *Menyanthes trifoliata*, specie rarefatta, tipica delle torbiere basse. Risulta necessaria una gestione che garantisca contemporaneamente la sopravvivenza della torbiera e dell'habitat del tritone, così come di *Menyanthes trifoliata*, che predilige invece ambienti umidi in avanzato stadio di interrimento. Nonostante la ridotta dimensione dell'area del SIC, che non garantisce un insediamento stabile di popolazioni riproduttive o svernanti di chirotteri, il sito risulta di particolare interesse per la presenza di specie di elevato pregio come *Vespertilio smarginato* (elencato in allegato II della Direttiva Habitat), anche se rilevato con la cattura di un solo individuo maschio, a sottolineare la probabile assenza nell'area di colonie e il prevalente utilizzo del SIC come sito di alimentazione.

4.2 Quality and importance

L'area comprende, seppur con soluzione di continuità, numerose zone umide con presenza di vegetazione torbigena di rilevante interesse, soprattutto per l'apprezzabile estensione delle formazioni a sfagni. Nel complesso si tratta di uno dei siti di maggiore interesse relativo al Parco dell'Adamello.

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

Il sito è costituito dal più vasto ghiacciaio delle Alpi italiane. Significativa la presenza delle specie animali e vegetali capaci di adattarsi a questo ambiente così estremo, ancora più importanti in questa parte di Europa, poichè rappresentano relitti sfuggiti alle glaciazioni.

4.3 Threats, pressures and activities with impacts on the site

4. SITE DESCRIPTION

[Back to top](#)

4.1 General site character

Habitat class	% Cover
N06	1.0
N09	1.0
N22	40.0
N16	8.0
N17	50.0
Total Habitat Cover	100

Other Site Characteristics

45.3 habitat proposto per leccete primitive. Superficie coperta 46%, rappresentatività A, sup.relativa C, grado conservazione A, valutaz.globale A. 41.81 habitat proposto per orno ostrieti termofili. Superficie coperta 5%, rappresentatività C, sup.relativa C, grado conservazione C, valutaz. globale C.

4.2 Quality and importance

Sito estremamente significativo da un punto di vista naturalistico per la grande varietà e buona qualità degli habitat; estremamente importante la presenza di vegetazione di tipo mediterraneo in areale disgiunto con querceti a *Quercus ilex*. Una ricca componente floristica include le endemiche *Daphne reichsteinii* e *Moehringia bavarica* (con areale sud-alpico illirico, specie prevalentemente rupicola) e *Daphne petraea* inserita nell'allegato 2 della direttiva Habitat. Rappresenta l'estremo occidentale per l'areale di numerose specie a corologia mediterranea nel distretto alpino. Particolare valenza naturalistica assumono le vegetazioni casmofitiche e la vegetazione di forra ricca di elementi laurifilli. La forra di San Michele risulta significativa per l'elevato valore paesaggistico. Nel sito è accertata la presenza di numerosi Chiroterri; il territorio del SIC rappresenta un'area ottimale per il foraggiamento grazie alla al Lago di Garda e all'ambiente di costa. La presenza delle scogliere e delle falesie favorisce le specie di chiroterri che utilizzano come rifugi le fessure tra le rocce o i ripari naturali. In tal senso appaiono importanti i risultati ottenuti tramite le indagini bioacustiche che hanno permesso di monitorare il Molosso di Cestoni (*Tadarida teniotis*) a conferma del ?carattere mediterraneo? dell'area del Garda.

Other Site Characteristics

45.31 nuovo habitat proposto leccete, sup.6%; 41.813 nuovo habitat onnoostrieti, sup. 1%; 41.812 nuovo habitat onnoostrieti, sup. 47%.

4.2 Quality and importance

Sito con elementi mediterranei, in areale disgiunto, con diversi tipi di habitat forestali e vegetazione casmofitica. Di rilievo naturalistico sono le leccete con elementi mediterranei qui presenti all'estremo occidentale del loro areale. Le aree rupestri di falesia costituiscono un importante habitat per numerose specie casmofitiche. La presenza di numerosi elementi floristici, da quelli mediterranei a quelli illirici e centroeuropei, in uno spazio così ravvicinato (lecci e faggi crescono sui due versanti di Cima Comer a pochi metri l'uno dall'altro) costituiscono un importante elemento naturalistico e paesaggistico per la regione alpina.

4.2 Quality and importance

Le valli di Sant' Antonio risultano essere siti molto interessanti dal punto di vista naturalistico in quanto la presenza antropica è rimasta essenzialmente confinata ai fondovalle di Val Brandet, Campovecchio e Sant'Antonio, non determinando sensibili modifiche dell'ambiente e del paesaggio. L'acqua caratterizza il sito sia in termini di presenza di laghi alpini, tra i quali di grande importanza il Lago di Picol, torrenti montani, sorgenti, torbiere e prati umidi, con acque qualitativamente e quantitativamente inalterate. Notevole inoltre la varietà di habitat: le peccete montane, molto ben conservate e caratterizzate dalla presenza della rarissima specie *Listera cordata*, i lariceti con brughiera subalpina e le vallette nivali in prossimità dei macereti, con tipica vegetazione umida, localmente caratterizzata dalla presenza di torbiere di transizione. Si assiste ad una ripresa della vegetazione arborea, con un innalzamento del confine del bosco: oltre i 2000 m di quota si insediano vegetazioni erbacee a *Carex curvula* e *Festuca varia* che dominano le praterie seminaturali d'alta quota, localmente caratterizzate da interessanti nardeti, localmente ricchi di specie floristiche molto interessanti.

Alpine (100.0
%)

3. ECOLOGICAL INFORMATION

3.1 Habitat types present on the site and assessment for them

[Back to top](#)

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
6210 B	X		12.63			B	C	B	B
6510 B			27.35			B	C	B	B
8310 B				48		C	C	B	B
91L0 B			9.9			B	C	B	B

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive

92/43/EEC and site evaluation for them

4. SITE DESCRIPTION

4.1 General site character

[Back to top](#)

Habitat class	% Cover
N16	85.0
N23	5.0
N09	10.0
Total Habitat Cover	100

Other Site Characteristics

E' stata rilevata la presenza di alcuni habitat ritenuti di interesse regionale, di cui si indica il codice CORINE e la percentuale indicativa sul totale della superficie del sito: cod. 41.812 (sup. 4%) , cod. 41.813 (sup. 7%). L'habitat 6210 è da considerarsi prioritario.

4.2 Quality and importance

"Sito molto significativo dal punto di vista naturalistico per la particolare geomorfologia del territorio, trattandosi di un altopiano carsico con grotte, doline, pressochè uniche in Lombardia; rilevante la presenza di una ricca entomofauna specializzata per ambienti di grotta, costituita da numerosi endemismi. Particolarmente significative sono le vegetazioni mesofile presenti all'interno delle doline in cui è ben evidente il fenomeno di inversione termica dal punto di vista vegetazionale. L'area del SIC risulta di elevato interesse sia per l'ampia diversificazione specifica sia per la presenza di specie di particolare pregio. Le cavità ipogee assumono una maggiore importanza per i chiroterri nella stagione autunno-invernale, in corrispondenza del periodo degli accoppiamenti e della formazione delle colonie invernali. La zoocenosi a chiroterri assume un' importanza elevata in relazione alla verificata presenza di rinolofo maggiore, vespertilio smarginato, vespertilio maggiore e vespertilio di Blyth."

4.1 General site character

Habitat class	% Cover
N14	10.0
N06	5.0
N16	85.0
Total Habitat Cover	100

Other Site Characteristics

41.812 habitat corine proposto per ornoostrieti , superficie coperta 35%, rappresentatività C, sup.relativa C, grado di conservazione B, valutaz.globale C.

4.2 Quality and importance

La peculiarità del sito è rappresentata dalla malacofauna stigobionte, crenobionte e troglobia che popola le due sorgenti comprese nel SIC e quella posta immediatamente a valle dello stesso. Queste sorgenti rappresentano lo sbocco puntiforme di un più vasto reticolo sotterraneo di origine carsica. Le peculiarità di ogni singola sorgente fanno sì che siano rappresentate nel sito la maggior parte delle specie lombarde e interessanti endemiti. Seppur di ridotta dimensione e senza siti di particolare idoneità per l'insediamento di colonie riproduttive o di svernamento, il SIC rappresenta un'area di un certo interesse per le attività trofiche della chirotterofauna, in particolare lungo il corso del torrente Agna. In tal senso il sito deve essere considerato probabilmente importante primariamente per le specie di chirotteri antropofile che popolano i centri abitati limitrofi ai confini del SIC, seppur non è da escludere una possibile presenza di specie più strettamente forestali.

Other Site Characteristics

41.813 nuovo habitat proposto ostrieti con faggio. Sup.coperta 1%, rappresentatività B, sup.relativa C, grado conservazione B, valutaz.globale B.

4.2 Quality and importance

Sito di grande importanza naturalistica per la presenza di numerosissime specie endemiche, alcune di importanza internazionale, ben tre specie sono inserite nell'allegato 2 della direttiva habitat. Numerosi gli habitat presenti, in particolare quelli relativi alle vegetazioni subalpine calcofile risultano ben conservati e differenziati. Si sottolinea come parte del sito risulti significativa anche per la presenza di piccoli nuclei abitativi che costituiscono testimonianze storiche dell'antica civiltà contadina di montagna. La presenza di nuclei residui di faggete illiriche all'estremità dell'areale occidentale assumono grande valore biogeografico.

41.813 nuovo habitat proposto, ostrieti mesofili con faggio. Sup. coperta 8%, rappresentatività B, sup.relativa C, grado conservazione B, valutaz. globale B.

4.2 Quality and importance

--

Sito estremamente significativo da un punto di vista naturalistico per la presenza di numerosi tipi di habitat, moltissime specie endemiche e di importanza internazionale. Di inestimabile valore la flora subalpina legata alle praterie calcaree e alle rupi carbonatiche. Ben tre specie sono presenti nella direttiva habitat, allegato 2. Alto risulta anche il valore naturalistico per le mughete microterme e firmeti relitti. La vegetazione forestale risulta maggiormente destrutturata, tuttavia sono presenti formazioni forestali di tipo illirico al limite del loro areale di distribuzione. La zoocenosi a chiroterri assume un'importanza non trascurabile anche in relazione al potenziale ruolo di area di transito e/o stazionamento temporaneo di specie migratrici parziali come il serotino comune e il serotino bicolore (specie caratteristica dell'est europeo e sporadica in Italia e presente solo nella porzione nord orientale).

Other Site Characteristics

100% privata

4.2 Quality and importance

Il sito è ininteressante per la presenza di una zona umida a quota relativamente bassa, dovuta allo scolmo delle acque. Si tratta di un piccolo pianoro, in cui l'acqua fuoriesce dal terreno come testata di falda. Si segnala inoltre la presenza di splendidi esemplari di ginepri molto alti (circa 7-8 metri), probabilmente centenari.

- **Group:** A = Amphibians, B = Birds, F = Fish, Fu = Fungi, I = Invertebrates, L = Lichens, M = Mammals, P = Plants, R = Reptiles
- **CODE:** for Birds, Annex IV and V species the code as provided in the reference portal should be used in addition to the scientific name
- **S:** in case that the data on species are sensitive and therefore have to be blocked for any public access enter: yes
- **NP:** in case that a species is no longer present in the site enter: x (optional)
- **Unit:** i = individuals, p = pairs or other units according to the standard list of population units and codes in accordance with Article 12 and 17 reporting, (see [reference portal](#))
- **Cat.:** Abundance categories: C = common, R = rare, V = very rare, P = present
- **Motivation categories:** **IV, V:** Annex Species (Habitats Directive), **A:** National Red List data; **B:** Endemics; **C:** International Conventions; **D:** other reasons

4. SITE DESCRIPTION

4.1 General site character

[Back to top](#)

Habitat class	% Cover
N06	6.0
N07	4.0
N23	20.0
N16	70.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

Sebbene inserito in un contesto fortemente antropizzato, il sito comprende una delle ultime zone umide legate alla divagazione naturale del F. Oglio e di tratti di formazioni boschive igrofile ad esse connesse. La presenza di lanche, con corpi idrici di apprezzabile estensione, consente l'insediarsi di fitocenosi idro-igrofile ricche e diversificate. Per quanto riguarda la componente vegetale, si evidenzia un'elevata presenza di specie esotiche. Tra queste si segnalano, per l'impronta che ne deriva alla vegetazione, *Amorpha fruticosa*, *Populus canadensis* e *Sicyos angulatus*. Ciò determina, unitamente alla scarsa copertura offerta dallo strato arboreo, il degrado di ampi tratti di saliceto.

4.3 Threats, pressures and activities with impacts on the site

4.4 Ownership (optional)

4.5 Documentation

5. SITE PROTECTION STATUS (optional)

[Back to top](#)

5.1 Designation types at national and regional level:

Code	Cover [%]	Code	Cover [%]	Code	Cover [%]
IT05	100.0	IT04	100.0		

5.2 Relation of the described site with other sites:

5.3 Site designation (optional)

6. SITE MANAGEMENT

[Back to top](#)

6.1 Body(ies) responsible for the site management:

Organisation:	Parco Regionale Oglio Nord
Address:	Piazza Garibaldi 25034 - ORZINUOVI - BS
Email:	info@parcooglionord.it

6.2 Management Plan(s):

An actual management plan does exist:

<input type="checkbox"/>	Yes
<input type="checkbox"/>	No, but in preparation
<input checked="" type="checkbox"/>	No

6.3 Conservation measures (optional)

3. ECOLOGICAL INFORMATION

3.1 Habitat types present on the site and assessment for them

[Back to top](#)

Annex I Habitat types						Site assessment			
Code	PF	NP	Cover [ha]	Cave [number]	Data quality	A B C D	A B C		
						Representativity	Relative Surface	Conservation	Global
3150 			0.63			B	C	C	C
3260 			1.03			B	C	B	B
3270 			1.0			A	C	B	B
6210 	X		2.6			A	C	B	B
91E0 			3.43			B	C	B	B

91F0		14.29			B	C	B	B
------	--	-------	--	--	---	---	---	---

- **PF:** for the habitat types that can have a non-priority as well as a priority form (6210, 7130, 9430) enter "X" in the column PF to indicate the priority form.
- **NP:** in case that a habitat type no longer exists in the site enter: x (optional)
- **Cover:** decimal values can be entered
- **Caves:** for habitat types 8310, 8330 (caves) enter the number of caves if estimated surface is not available.
- **Data quality:** G = 'Good' (e.g. based on surveys); M = 'Moderate' (e.g. based on partial data with some extrapolation); P = 'Poor' (e.g. rough estimation)

3.2 Species referred to in Article 4 of Directive 2009/147/EC and listed in Annex II of Directive 92/43/EEC and site evaluation for them

N16	80.0
N07	15.0
N06	5.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

Il sito può essere considerato un mosaico, su piccola scala, di aspetti vegetazionali diversificati, tutti comunque riferibili alla serie dinamica planiziale che conduce al climax del "querco-ulmeto". Degna di menzione è la l'abbondante presenza di *Salix elaeagnos* che, qui, assume portamento arboreo, con esemplari di notevoli dimensioni (h 15 m), e tende a caratterizzare, anche fisionomicamente, il bosco igrofilo. Vanno altresì segnalate situazioni con caratteristiche prossime a quelle di praterie semi-aride a cui si sovrappone una copertura arboreo-arbustiva rada e discontinua (pioppi e salici), di rilevante interesse fitogeografico per la presenza di numerose specie erbacee termo-xerofile. Ciò è imputabile a motivi di ordine edafico (substrati grossolani a elevata permeabilità).

Total Habitat Cover	100

Other Site Characteristics

Area di golena fluviale su suoli grossolani, dove sono rappresentate tutte le fasi della successione vegetazionale, dalle comunità acquatiche al bosco subclimacico a dominanza di *Quercus robur* e *Ulmus minor*. Da rilevare, in particolare, la presenza di raccolte d'acqua all'interno del bosco, che favoriscono l'insediarsi di cenosi idro-igrofile di notevole interesse.

4.2 Quality and importance

Il sito ospita la più numerosa popolazione di *Emys orbicularis* del settore centrale della Pianura Padana. Si riscontra un'apprezzabile diversificazione degli habitat censiti, con particolare riferimento ai differenti aspetti della vegetazione acquatica e ripariale; da sottolineare inoltre la presenza di interessanti tratti di prateria xerofila sotto copertura arboreo-arbustiva (pioppi e salici).

- **Cat.:** Abundance categories: C = common, R = rare, V = very rare, P = present
- **Motivation categories:** IV, V: Annex Species (Habitats Directive), A: National Red List data; B: Endemics; C: International Conventions; D: other reasons

4. SITE DESCRIPTION

[Back to top](#)

4.1 General site character

Habitat class	% Cover
N16	66.0
N15	19.0
N21	5.0
N06	7.0
N08	3.0
Total Habitat Cover	100

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito

4.2 Quality and importance

Una certa attenzione va posta ai marcati fenomeni erosivi di un tratto di sponda che hanno dato origine ad una scarpata di 3m lungo la riva. Si può ovviare a questo inconveniente ampliando l'estensione del sito, sino a comprendere aree che garantiscano un maggior spazio di divagazione al fiume. Da segnalare, inoltre, la tendenza a conquistare ulteriore spazio alle colture (rimozione della vegetazione arboreo-arbustiva e dissodamento).

4.3 Threats, pressures and activities with impacts on the site

4.4 Ownership (optional)

4.5 Documentation

N07	6.0
N08	3.0
N15	63.0
Total Habitat Cover	100

Other Site Characteristics

presenza di Magnocariceti.

4.2 Quality and importance

Si tratta di un'asta fluviale abbandonata attualmente in stato di interrimento. L'ambiente è dominato dal canneto a *Phragmites australis* in ogni sua parte di elevata naturalità. Nonostante la bassa biodiversità dal punto di vista floristico, sono presenti entità ormai rare nelle zone planiziali padane (es.: *Althaea officinalis*, *Leucojum aestivum*, *Polygonum salicifolium*). L'area ospita una gran varietà di specie animali, in particolare uccelli, tra cui molte di interesse conservazionistico.

Other Site Characteristics

Non si evidenziano altre caratteristiche nel sito.

4.2 Quality and importance

Il sito è testimonianza delle attività e delle trasformazioni operate dall'uomo per rendere l'ambiente montano adatto alle attività più consuete, dal disboscamento alla bonifica di aree palustri per ricavare spazi da dedicare al pascolamento del bestiame e allo sfalcio dei prati. Nel SIC restano evidenti tracce di numerose aree umide residuali e frammentate, raffiguranti ormai i diversi stadi di interrimento cui vanno inesorabilmente incontro sia per evoluzione naturale sia per opere di drenaggio e bonifica. Si segnala la presenza di specie rare come *Drosera rotundifolia* e *Menjanthes trifoliata*. Estesi sono anche gli arbusteti subalpini a ericacee e i lariceti secondari.
